For Immediate Release

October 30, 2014

AM Stabilizers Corporation announces the latest innovation in liquid barium carboxylate intermediates for the formulation of mixed metal liquid stabilizers used in flexible vinyl. An answer to the markets requirement for products meeting ever increasing demands from worldwide environmental initiatives AM Stabilizers has commercialized PlastiStab™ 2534. This patent pending barium intermediate contains 34% barium and is initiated without the use of phenol, alkyl phenols, or alky phenol derivatives. PlastiStab™ 2534 addresses concerns over the current barium Intermediate technology which often utilizes nonyl phenol or dodecyl phenol in the process to produce intermediates. PlastiStab™ 2534 is essentially phenol free and alkyl phenol free and is commercially available today in any quantity. For additional information on PlastiStab™ 2534 or to place orders, contact the customer service department at 219-844-3980 EXT 232.
